

SUNDAY
Noise Data Recording- between 10-12 am.

Site Noise Recording

The noise data records on Sunday shows that there are not significant noise level changes between the morning and afternoon hours. Although, there still some level of loud noise level 70-80 dB, the density of this level of noise is less compare to Fridays recording. The 60-70db noise level is dominant in the area on Sunday morning and afternoon hours. In the areas such as the market place, the noise is less concentrated and at the lower degree, as the area was not in use on Sunday.
